CONNECT ACROSS ANY DEVICE, FROM ANY LOCATION, INSTANTLY

Keeping team members connected across a facility, worksite, or even across the country is critical to today's businesses. Yet, with so many different devices and networks, ensuring connectivity is becoming increasingly difficult.

In a recent Motorola Solutions survey, over 90% of workers said it would be valuable if they could seamlessly communicate across any type of device. This is important because, as the same survey found, almost all workers are using more than one device on the job, switching throughout the day to the tools best suited for a specific task. That may include traditional two-way mobile radios, smartphones, laptops, tablets, and more.

Add the need for local and area wide communication, and many companies are left relying on a growing mix of Wi-Fi, two-way radio networks, and multiple mobile phone networks across the country. This mix of devices and networks slows communications, making it more complex to communicate essential information across an organisation.

What's needed? An integrated communications solution that allows all workers to connect at the pace of today's business expectations — across any device, from any location, instantly.

WAVE PTX AND TLK SERIES TWO-WAY RADIOS: THE NEXT EVOLUTION OF PTT

Motorola Solutions [WAVE PTX](#) is a network-independent broadband and Push-to-Talk (PTT) subscription service that instantly connects your team at the push of a button. With the WAVE PTX mobile app, any smartphone, tablet, or computer can act like a two-way radio, for instant PTT communication. This enables users to have access to all of the capabilities of a smart device and a two-way radio in one, without the need to carry two devices. And with WAVE PTX dispatch, you can manage your teams and field personnel from anywhere, using a standard web browser with Internet connection. With these solutions, radio users and those on smartphones, tablets, and other broadband devices can connect whenever and wherever needed.

Motorola Solutions TLK Series two-way radios offer all the benefits of the WAVE PTX mobile app in a rugged two-way radio form factor that operates across the country on a reliable, wide area coverage LTE network. With this simple, PTT device, workers can directly access colleagues with crisp, clear audio. All without the need to build and maintain complex radio infrastructure.

TLK Series radios are purpose-built for rugged use across a range of often chaotic, loud, or dispersed worksites, including construction, private security, transportation, and field service. No texting, apps, or email to get in the way. With intuitive PTT operations, long battery life and seamless deployment, employees across a range of industries can get started immediately.

TRANSPORTATION AND LOGISTICS: TAKING INSTANT CONNECTION ON THE ROAD

A two-way radio shouldn't stop working when it leaves your facility. TLK Series radios merge the power of nationwide mobile broadband with the simplicity and functionality of a PTT two-way radio, making them ideal for trucking, shipping, towing, and other transportation and logistics companies. WAVE PTX connects all employees' devices, from smartphones and TLK Series radios, to laptops and tablets. Drivers can instantly connect with the warehouse, including those on digital or analogue MOTOTRBO devices, with other drivers, or with a customer expecting a shipment. Dispatchers can set up location-based talk groups, so conversations can be limited to people within a specific facility or area, prioritising essential interactions.

In addition, TLK Series radios and WAVE PTX integrate with Motorola Solutions' technology ecosystem, further automating security functions with AI and analytics. For instance, workers and security personnel can get automatic alerts on their radio or other device when a loading bay is blocked or an unauthorised visitor accesses a secure area.

CONSTRUCTION: JOBSITE TOUGH

Smartphones simply aren't built for construction sites. Workers need something tougher, a device that can withstand dirt, dust, and falls; the ruggedness of the TLK Series radios makes them ideal devices for construction. Designed to perform in harsh working environments, regardless of rain, dust, extreme temperatures, or the occasional drop, TLK Series radios offer loud, clear audio, despite surrounding noise.

Whether the next job is across the street, across the city, or across the country, these radios are ready to work wherever you are. Employees can travel from the jobsite to the highway to the office, without losing instant connection to their teams. Plus, with the WAVE PTX SafeGuard Package, dispatchers can create talk groups based on location, so you can communicate with exactly the people you need to, without constantly interrupting those you don't.

Now workers can easily coordinate deliveries of equipment and supplies, quickly get an answer from headquarters, or instantly conduct an ad-hoc discussion with everyone on site, even when using heavy gloves. With one device that can do everything your workers need, you can streamline your technology and do away with the complexity of using multiple devices during the work day.

HOSPITALITY: SERVICE IN AN INSTANT

It takes a large, interconnected team to make hospitality property teams function together safely, efficiently, and smoothly. The front desk, housekeeping, security, catering, and others are in constant contact and need instant connection. From checking on reservations to coordinating private dining events, and a host of other expected and unexpected needs, service is measured in seconds. So, instant communication within and across teams, anywhere on a property or across the country, is essential to a seamless operation.

With WAVE PTX and TLK Series radios, you can instantly connect with other analogue or digital MOTOTRBO devices, so your team can reach the right person with the push of a button for a fast response. That means they can quickly coordinate airport shuttles, update staff at a partner property to tell them a VIP guest is headed their way, or instantly communicate with excursion groups, no matter how far they are from the main property. Plus, TLK Series radios and WAVE PTX integrate with Motorola Solutions' technology ecosystem, so you can automate security functions with AI and analytics.

PRIVATE SECURITY: COMMUNICATIONS AT THE SPEED OF SECURITY

Perhaps no industry requires instant communication more than security, where safety often depends on split second decisions. With WAVE PTX and TLK Series radios, your security personnel have a tool that operates as fast and reliably as they do. Effortlessly link teams across town or across the country. You can see the real-time location of all resources, no matter their location, through the WAVE PTX mobile application via smartphone or the dispatch app.

The system can be easily expanded, so that wherever the next job is, an instant communication system is always ready to deploy. For example, at a large music festival, security personnel can immediately notify the medical tent of an emergency. Using real-time GPS data from the user's WAVE PTX device, medical staff can immediately send help to the exact location.

When undercover operations rule out two-way radios, the [WAVE SafeGuard Package](#) brings PTT and other essential features, such as emergency calling, remote user checks, and discrete listening to a smartphone or other device.

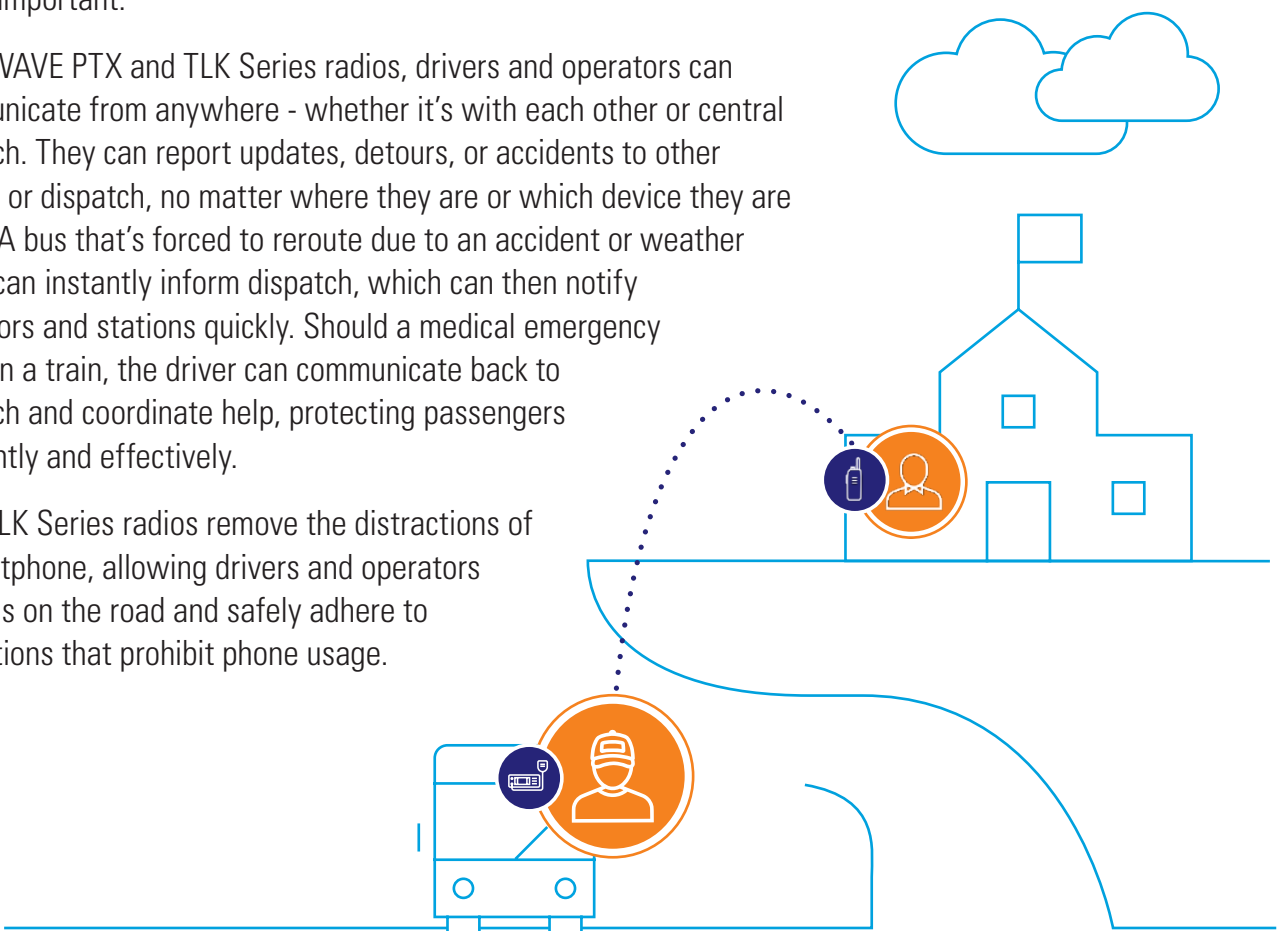

PUBLIC TRANSPORT SAFETY IS THE PRIORITY

Every day, thousands of people rely on public transport to travel to their destination, and getting passengers to this destination safely is highly important.

With WAVE PTX and TLK Series radios, drivers and operators can communicate from anywhere - whether it's with each other or central dispatch. They can report updates, detours, or accidents to other drivers or dispatch, no matter where they are or which device they are using. A bus that's forced to reroute due to an accident or weather event can instantly inform dispatch, which can then notify operators and stations quickly. Should a medical emergency arise on a train, the driver can communicate back to dispatch and coordinate help, protecting passengers efficiently and effectively.

Plus, TLK Series radios remove the distractions of a smartphone, allowing drivers and operators to focus on the road and safely adhere to regulations that prohibit phone usage.

WAVE PTX AND TLK TWO-WAY RADIOS: SEAMLESSLY CONNECT TEAMS AT THE SPEED OF TODAY'S OPERATIONS

We live in an always-on, instant connection world where an answer is just a text or call away. Yet, many workers, like those in construction, hospitality, private security, transportation, and education still need a purpose-built device that includes the communication tools they need while eliminating everything they don't. They need instant voice communication, within a building, on the road, or across the country, without complex interfaces and the distractions of other devices.

With WAVE PTX and TLK Two-Way Radios, your employees can stay connected anywhere in the world. With a single push of a button, they have direct access to colleagues with crisp, clear audio, regardless of the device or network they use. All without the need to build and maintain radio infrastructure.

Now the reliability and instant PTT features your operation needs are available everywhere, so you can empower your team to work more safely, efficiently, and productively no matter where their day takes them.

[Learn more](#) about how WAVE PTX and TLK Series radios can connect your team members across campus and across the country.
